

Tamper evident tube

Safety for consumers with tamper evident tubes

Our tamper evident tubes provide security at first sight. Imagine this, a consumer buys a tube online or in store or gets a treatment from the doctor. He unboxes the tube and while opening the cap, he can be sure to be the first one to open the packaging. Isn't that simple peace of mind? Plus, he can be sure that with the high barrier packaging you chose, you guarantee that the contents are well protected and provide long shelf life. It is not visible to the consumer – it is just something you take care of as a brand. Once again, peace of mind.

Product Areas

- Eye creams
