

Discover our safe & compliant tubes

Our Polyfoil® tubes offer the best protection against light, air, water vapor diffusion and substance migration. Not only do their barrier properties win you over, but they are also very user-friendly and safe. They also offer high compatibility with liquid or semi-solid medication. The selection ranges from single-dose tubes and dropper tubes, to tubes with tamper-proof and child resistant features. Various applicators facilitate correct dosage and the application of medicine. Trust the original when it comes to the main packaging materials for applications in dermatology, ophthalmology, animal health and pain relief. The Polyfoil® tubes are produced in Switzerland and the US facility.

- High barrier properties for sensitive contents
- Certified child resistant caps
- Targeted application of the product
- Hygienic single-dose application options
- Extended shelf-life
- Options for sterilizing by γ and/or x-ray

All materials are clearly defined as pharmaceutical or food compliant and meet the regulatory requirements of REACH, the EU's food legislation and the FDA. We adhere to the U.S. Drug Master File for our pharmaceutical specifications. We observe the guidelines of the Good Manufacturing Practice (GMP) and produce in clean rooms according to ISO 14644 class 8/9.
