NEOPAC
THE TUBE

Small-diameter, high-barrier laminate tubes proudly made in the U.S.

Premium, Swiss-quality tubes manufactured to the highest pharmaceutical standards in a new, state-of-the-art plant in North Carolina.

Small collapsible tube packaging

Beginning in the Spring of 2019, Neopac will open its doors to its US-based, small diameter tube manufacturing facility in Wilson, North Carolina. This tube manufacturing center will enable shorter lead times for our US-based customers while providing a secondary production facility in conjunction with our Swiss-based headquarters.

Neopac's world-renowned high-barrier Polyfoil® tubes (10 mm and 13.5 mm diameters) will be manufactured at this new location. These small-diameter tubes are ideal for pharmaceutical, cosmetic and oral care formulas containing 1-8 ml content.

Highest quality standards

- GMP Production
- ISO Certified Clean Room
- FDA approved packaging
- Low Migration Decoration
- Materials adhere with US Drug Master File
- Tubes can be sterilized
