

SpringTube™

Maximum flexibility, perfectly in shape

The 3D Neopac novelty

The SpringTube™ meets the requirements of consumers, brands and manufacturers of beauty products alike. The tube is of particularly high quality thanks to its **dimensional stability**, and the **EVOH barrier** safely protects the product.

The varied decorative options with **digital printing, flexographic printing and cold foil stamping** offer almost unlimited design and customization possibilities, such as for country-specific or promotional references. SpringTubes™ can be **individualized to one single tube** thanks to variable data printing: brands can easily create direct on-pack marketing activities such as sales promotions, competitions, collectables or gamification.

The SpringTube™ is **flat extruded** and has extremely **precise layer thickness**. As a result, the tube is stable, and can be filled and welded quickly. With SpringTube™, you benefit from our complete know-how in tube production, as each step in the process is executed **under one roof**: flat extrusion, decoration, tube forming, shoulder and cap mounting.

6 reasons to choose SpringTube™

#instagramable

Perfect product appearance thanks to high-quality material and printing, including hotfoil stamping

#convenient

The robust tube guarantees easy application

#individual

Can be individualized to one single tube thanks to variable data printing
